## DIAGNOSTICS AND TREATMENT OF EYE DISEASES

Specialized ophthalmic hospital for active treatment Luxor is a modern healthcare institution established in 2004 by Dr. Dimitar Taskov. We perform diagnostics and surgery of eye diseases. The hospital consists of a comfortable inpatient ward and halls complying with the European standards. Next to it, in Medical Center Luxor we have doctors' offices with advanced and specialized diagnostics equipment. The accreditation score of the hospital is the maximum – five stars. It is certified with ISO 9001:2015

Medical Centre Luxor offers diagnostics of eye diseases with state-of-the-art technology.

- Contactless measurement of intraocular pressure
- Computerized Perimetry and Pachymetry
- Corneal topography and Wavefront analysis
- Fluorescein angiography (FA)
- A and B- echography
- Optical coherence tomography of anterior and posterior ocular segment (OCT)
- Fundus Biomicroscopy
- Optical biometry
- Diagnostics of child vision

## EYE SURGERY

In Eye Hospital Luxor, we offer the most advanced femtosecond, bloodless and seamless cataract surgery, using phacoemulsification method with implantation of high-tech lenses through a minimum incision of 2 mm. Laser vision correction for nearsightedness, farsightedness and/ or astigmatism with femtosecond laser Alcon LenSx Laser System and the excimer laser MEL 80 of CARL ZEISS.

In Eye Hospital Luxor we perform eye surgeries in full range.

- Minimally invasive and classic glaucoma surgery.
- Laser therapy for rheumatic diseases - ALC
- Laser therapy for secondary cataracts - YAG
- Laser therapy for glaucoma - SLT
- Keratoconus treatment - Cross-Linking
- Eye surgery for ocular traumatism and tumors.
- Treatment of pediatric ophthalmic diseases - amblyopia /lazy eye/, strabismus /crossed eye/
- Aesthetic face and eyelid surgery.
